### IN THIS ISSUE

Welcome  
Research  
Meeting in Norway  
Meet the partners

Welcome to the second newsletter of the Erasmus+ project SociALL. Making social care technologies accessible to all, acronym SociALL. SociALL wants to take advantage of the COVID-led increased use of technological developments to ease the tasks of social care professionals while simultaneously yielding better services for patients. This newsletter is thus intended to provide information to relevant stakeholders on the activities, outputs and events of the SociALL project.

**Co-funded by  
the European Union**

### PROJECT AIMS

The main aims of the SociALL project are to determine the real upskilling needs of care professionals in relation to the use of tech-enhanced tools and practices in the field of care, create training materials matching the upskilling needs and provide tailored solutions via SociALL training package.

### PROJECT TARGET GROUP

SociALL directly reached social care professionals and their respective institutions. They are the direct end users of the project result and impacted by the implementation of the Work Packages activities.

### MEETING IN OSLO

Study visit and TMP successfully held in Oslo in August 2023, with great results and positive feedback from project partners and external stakeholders.

This meeting provided a platform for all partners to come together and collectively discuss the progress of the project. During the TPM, MedicalScan presented the results of the survey to the consortium, shedding light on the key findings, emerging trends, and noteworthy insights gleaned from the aggregation of data. This presentation served as a pivotal moment for partners to engage in discussions, share perspectives, and collectively strategize for the subsequent phases of the project.

### IMPLEMENTATION OF WORK PACKAGE 2 ASSESSMENT OF UPSKILLING NEEDS

The implementation of Work Package 2 (WP2): Assessment of Upskilling Needs witnessed significant progress, characterized by a well-defined division of labour among partner organizations. In this collaborative endeavour, MedicalScan emerged as the leading partner, playing a pivotal role in guiding and steering various activities within WP2.

As the work progressed, MedicalScan took charge of providing the structured methodology for desk research, ensuring consistency and comparability among all partners. The partners successfully completed their respective desk research reports, with MedicalScan's guidance reflecting in the overall progress.

In surveying care professionals, MedicalScan again assumed a leading role by developing the methodology and survey questionnaire templates. Partners were actively engaged in executing surveys, and the project was in the concluding phases of this critical data collection.

The aggregation of data, a pivotal step in WP2, was underway, with MedicalScan at the forefront of collecting and synthesizing desk research and survey findings. This phase not only showcased their proficiency in handling complex information but also underscored their commitment to creating a comprehensive transnational report.
